- Bootcamps
- Mentoring Program
- Tailored Workshops

Water heals landscapes

Connect with us to learn how to manage water *better*.

- Understand the water processes that underpin landscape function.
- Harness those processes for whole-of-landscape benefits.
- Take cost-effective steps for climate resilience and nature repair.
- Share the journey with a proactive community.

Field Days: For groups eager to learn how to read water processes to interpret landscape health. Discover the strategies that deliver results. A half day event in the field.

Bootcamps: Learn skills to scope, map, design, implement and monitor your project. A fun, hands-on course for communities seeking real-world solutions. The 3-day format allows for deeper learning through a practical on-ground project, but a 2-day option is available.

Mentoring Program: Receive expert support to achieve success with a self-directed project on your property. This program is available to Bootcamp graduates and runs for six months.

Tailored Workshops: Nature Repair projects are complex. As you scope projects and build team capacity, reach out to us to integrate the science, skills and strategy you need.
